

Resource List

Spreadsheet or document of the following:

- What resources do you need to complete the project
 - Access to honors students to get feedback from.
 - Access to Honors College Reps who would likely be using the application on a regular basis, who we could also receive feedback from.
 - Figma software (can potentially buy the upgraded figma plan for \$25 a month)
 - Access to an Oregon State IT Rep to better understand how OSU maintains servers for their apps and data, and how to embed ONID login.
 - If hitting the programming phase, we will need a server to store all the data on.
- How and where will you get these resources
 - Our project partner (Dr. Doolen) has agreed to help coordinate student focus groups as well as get us into contact with Honors College Organizers/Reps in order for our team to receive feedback on the application prototypes.
 - Set up meeting times and locations, and or electronic surveys through email or other. Being able to have students test the prototypes before providing feedback would be a major plus.
 - Figma is free (unless the upgrade plan is bought, then \$25 a month)
- What is your timeline for securing these resources
 - During testing phases we will need honors students/staff feedback (dates from timeline here). Student/staff feedback should be taken at multiple points throughout the prototyping process. Afterward, each prototype should be updated to better reflect the needs of the users and the needs of the project partner. The current timeline is to start the first session of users studies around **Jan 1st**.
 - Email communication between OSU IT has yet to be started, will reach out by **Nov 20th**.
 - Figma is accessible at all times but will be used towards the end of the term to create the high-fidelity prototype used for user testing and feedback.
